Case Study : Scotia Boardroom, Edinburgh

Design and install a boardroom that would create a compelling demonstration space for the benefits delivered by the latest audio visual technology

Client:

Scotia UK plc

Location:

Scotia Boardroom, Edinburgh

Project:

Design and install a boardroom that would create a compelling demonstration space for the benefits delivered by the latest audio visual technology

Background:

As Scotia's website says, seeing is believing. So rather than talking in the abstract about how effective the latest audio-visual technology can be, Scotia decided to demonstrate it. How? By creating a boardroom in which clients could witness the impact for themselves.

Solution:

Scotia's first task was to demonstrate the wide variety - and impressive quality - of source equipment. This included video, DVD, PCs and video conferencing, the latter using the very latest Polycom HDX series.

The next challenge was to install a variety of display technologies. This included an interactive 3M Walldisplay (allowing users to write directly onto the screen using a special 'pen'), a 50" plasma screen and a rear projection screen. Although it is unlikely that any one room would require all of these sources to be available, it, nonetheless, demonstrates the range of options on offer to clients. To complement this source and display technology, Scotia specified the most advanced BOSE audio system to deliver crystal clear sound to the whole room.

This technically advanced technology is, however, very easy to operate, thanks to Scotia's use of an AMX Modero wireless touch panel. From this one control centre, the user can operate all of the technology in the room - from anywhere in the room.

Finally, Scotia designed and built a suite of boardroom furniture, including an electric rising credenza (also operated by the AMX unit), cabinets for the various screens and a boardroom table with concealed cabling.

Equipment:

• AMX Touch Panel Control
• Sony 50" plasma
• Sony G50 Video Conference System
• 3M Multimedia Projector
• 3M Digital WallDisplay
• Bose Sound System
• QSC Amplifier
• Allen and Heath Digital Sound Processor
• CAT5 Distribution System

Our list of client boardroom solutions speaks for itself - we have the knowledge if you have the need so why not allow us to create a sumptuous boardroom you can be proud of.
