

Scotia UK Sixty Years

smots™

Scotia Medical Observation and Training System

Insitu Solution

Complete Wireless Freedom

This new smots™ solution allows you to use multiple wireless full HD cameras with high fidelity 2 way audio and an optional feed for patient monitor or other digital source. Infra-red illuminators allow filming in complete darkness. New H265 streaming means much reduced bandwidth for exceptional quality. Less storage is required for video which ultimately helps us all make a difference environmentally.

The 103° wide angle lenses pickup every detail in bright, sharp images. All video may be viewed live using smots™ Control Center software and of course is available for instant playback in debrief. The live video may be tagged with observers' comments. Cameras use standard 802.11X wireless protocols for simple connection to a portable access point, or your infrastructure network. Battery sets provided give 8 hour's use.

DAY-AND-NIGHT WITH IR ILLUMINATION

EXCEPTIONAL H265 QUALITY

TWO-WAY AUDIO COMMUNICATION

Current applications include use in :

- Immersive training environments
- Field hospital training
- Ambulance training
- On the ward training
- Hands on skills observation
- Patient transfer observation
- Theatre skills

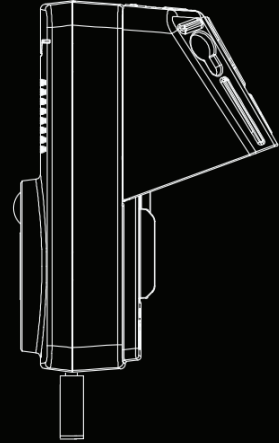

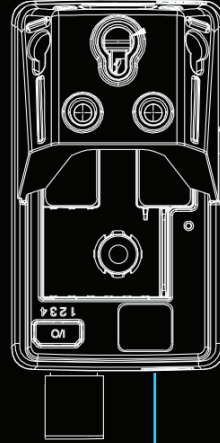

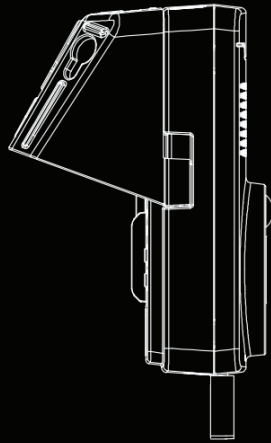

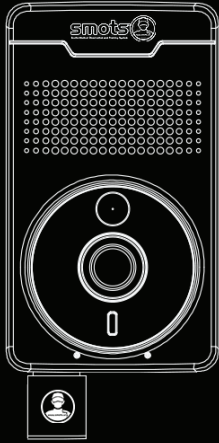

Mounting of the wireless cameras is easy using either the strong angle adjustable clip, or the body worn harness.

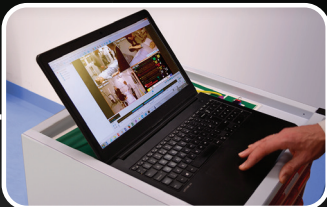

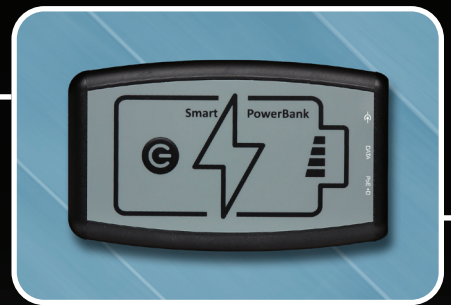

Scotia UK Sixty Years

Not a scaled down or compromised version, smots™ travel systems are a full smots™ installation, ready to fulfil all the functionality, flexibility and ease of use that has made smots™ the name it is today.
